Additional Information for WHOA (your email address will not be shared):

WHOA may contact me at this email address: _____

1. Please return the completed survey in the enclosed envelope. WHOA will scan in the surveys and convey them to the BLM electronically. You may contact the BLM directly if you wish to verify your inputs were accurately tallied.
2. There are currently 2500 homes in Placitas. How will 5000 more affect the water table, traffic, wildlife/corridors?

WILD vs FERAL? Horses originated in North America and co-evolved with this habitat. Mitochondrial DNA Tests have proven that the horse that left here (for only 10,000 yrs) is the same horse that the Spanish brought back. "ICE AGE horse bones were found in 1938 in SANDIA MAN CAVE. These were carbon dated in the 1950's and they are 25,000 years old." - Ila Bromberg Archeologist, Monero Mustangs
Horses and the Range: Horses have two rows of teeth and trim grass rather than pulling it out with their tongue (by the roots), as other ungulates can/do.

Our Wild Horse Herd The first horse re-introduced to the wild in the Americas may have been an escaped chestnut mare belonging to one of Cortez' Conquistadors, in 1519. In 1540, Francisco Vasquez de Coronado and his Expedi-	tion rode their Spanish horses into the Rio Grande Valley near the current site of the Coronado State Park, across the river. In 1598, Juan de Onate lost approximately 900 horses in what would become New Mexico, which is the first recorded band of horses to run	free in the present day United States. Are the wild horses descendants of these Spanish horses, which are now extinct in Spain? Their conformation and DNA say yes. When the DNA from the wild horse herd in Placitas were tested, the results con-	firmed the Spanish heritage of many of the horses. "Five of the horses were tested by the University of Kentucky and deemed 50 to 60 percent Spanish" -Sandoval Signpost, Oct 04
--	--	---	--

WHOA Completes Fencing of Open Space
The Placitas wild horses roamed unfettered throughout the La Mesa and Sundance Subdivisions for years. Though most residents love them, WHOA initiated a public safety project to keep the horses (and cattle) off the roads. This 2 mile fence, (the third fence completed by WHOA) spans the entire southern and eastern sides of the Albuquerque Open Space, at a low cost of \$13,000. This fence and more is required by the Master Plan for this Open Space, and as such helps keep this land from being claimed by the BLM from whom it was legally purchased in 1966.
Much of the old fencing in other areas have also been repaired.
There are always fence checking and/or fence repair parties in process, please call to join, or send donations if you would like to help!

Donations to WHOA can be sent in the attached envelope

Questions? Contact WHOA by email: wildhorsesnm@yahoo.com or by phone: (505) 867-5228

Are the wild horses descendants of these Spanish horses, which are now extinct in Spain? Their conformation and DNA say yes. When the DNA from the wild horse herd in Placitas were tested, the results con-

firmed the Spanish heritage of many of the horses,

"Five of the horses were tested by the University of Kentucky and deemed 50 to 60 percent Spanish"

-Sandoval Signpost, Oct 04

WHOA Completes Fencing of Open Space

The Placitas wild horses roamed unfettered throughout the La Mesa and Sundance Subdivisions for years. Though most residents love them, WHOA initiated a public safety project to keep the horses (and cattle) off the roads. This 2 mile fence, (the third fence completed by WHOA) spans the entire southern and eastern sides of the Albuquerque Open Space, at a low cost of \$13,000. This fence and more is

required by the Master Plan for this Open Space, and as such helps keep this land from being claimed by the BLM from whom it was legally purchased in 1966.

Much of the old fencing in other areas have also been repaired.

There are always fence checking and/or fence repair parties in process, please call to join, or send donations if you would like to help!

Questions? Contact WHOA by email: wildhorsesnm@yahoo.com or by phone: (505) 867-5228

can be sent in the attached envelope

Additional Information for WHOA (your email address will not be shared):

WHOA may contact me at this email address: marshaokeefe@myway.com

- Please return the completed survey in the enclosed envelope. WHOA will scan in the surveys and convey them to the BLM electronically. You may contact the BLM directly if you wish to verify your inputs were accurately tallied.
- There are currently 2500 homes in Placitas. How will 5000 more affect the water table, traffic, wildlife/corridors?

WILD vs FERAL? Horses originated in North America and co-evolved with this habitat. Mitochondrial DNA Tests have proven that the horse that left here (for only 10,000 yrs) is the same horse that the Spanish brought back. "ICE AGE horse bones were found in 1938 in SANDIA MAN CAVE. These were carbon dated in the 1950's and they are 25,000 years old." - Ila Bromberg Archeologist, Monero Mustangs
Horses and the Range: Horses have two rows of teeth and trim grass rather than pulling it out with their tongue (by the roots), as other ungulates can/do.

Our Wild Horse Herd
The first horse re-introduced to the wild in the Americas may have been an escaped chestnut mare belonging to one of Cortez' Conquistadors, in 1519.
In 1540, Francisco Vasquez de Coronado and his Expedition rode their Spanish horses into the Rio Grande Valley near the current site of the Coronado State Park, across the river.
In 1598, Juan de Onate lost approximately 900 horses in what would become New Mexico, which is the first recorded band of horses to run tree in the present day United States.
Are the wild horses descendants of these Spanish horses, which are now extinct in Spain? Their conformation and DNA say yes. When the DNA from the wild horse herd in Placitas were tested, the results confirmed the Spanish heritage of many of the horses.
"Five of the horses were tested by the University of Kentucky and deemed 50 to 60 percent Spanish"

WHOA may contact me at this email address: SNOWOLF@LOBO-NEE

- Please return the completed survey in the enclosed envelope. WHOA will scan in the surveys and convey them to the BLM electronically. You may contact the BLM directly if you wish to verify your inputs were accurately tallied.
- There are currently 2500 homes in Placitas. How will 5000 more affect the water table, traffic, wildlife/corridors?

WILD vs FERAL? Horses originated in North America and co-evolved with this habitat. Mitochondrial DNA Tests have proven that the horse that left here (for only 10,000 yrs) is the same horse that the Spanish brought back.

"ICE AGE horse bones were found in 1938 in SANDIA MAN CAVE. These were carbon dated in the 1950's and they are 25,000 years old." - Ila Bromberg Archeologist, Monero Mustangs

Horses and the Range: Horses have two rows of teeth and trim grass rather than pulling it out with their tongue (by the roots), as other ungulates can/do.

Our Wild Horse Herd

The first horse re-introduced to the wild in the Americas may have been an escaped chestnut mare belonging to one of Cortez' Conquistadors, in 1519.

In 1540, Francisco Vasquez de Coronado and his Expedi-

tion rode their Spanish horses into the Rio Grande Valley near the current site of the Coronado State Park, across the river.

In 1598, Juan de Onate lost approximately 900 horses in what would become New Mexico, which is the first recorded band of horses to run

free in the present day United States.

Are the wild horses descendants of these Spanish horses, which are now extinct in Spain? Their conformation and DNA say yes. When the DNA from the wild horse herd in Placitas were tested, the results con-

firmed the Spanish heritage of many of the horses.

"Five of the horses were tested by the University of Kentucky and deemed 50 to 60 percent Spanish"

-Sandoval Signpost, Oct 04

WHOA Completes Fencing of Open Space

The Placitas wild horses roamed unfettered throughout the La Mesa and Sundance Subdivisions for years. Though most residents love them, WHOA initiated a public safety project to keep the horses (and cattle) off the roads. This 2 mile fence, (the third fence completed by WHOA) spans the entire southern and eastern sides of the Albuquerque Open Space, at a low cost of \$13,000. This fence and more is

required by the Master Plan for this Open Space, and as such helps keep this land from being claimed by the BLM from whom it was legally purchased in 1966.

Much of the old fencing in other areas have also been repaired.

There are always fence checking and/or fence repair parties in process, please call to join, or send donations if you would like to help!

Donations to WHOA can be sent in the attached envelope Questions? Contact WHOA by email: wildhorsesnm@yahoo.com or by phone: (505) 867-5228

Additional Information for WHOA (your email address will not be shared):

WHOA may contact me at this email address: *friendlyhomecare@gmail.com*

- Please return the completed survey in the enclosed envelope. WHOA will scan in the surveys and convey them to the BLM electronically. You may contact the BLM directly if you wish to verify your inputs were accurately tallied.
- There are currently 2500 homes in Placitas. How will 5000 more affect the water table, traffic, wildlife/corridors?

WILD vs FERAL? Horses originated in North America and co-evolved with this habitat. Mitochondrial DNA Tests have proven that the horse that left here (for only 10,000 yrs) is the same horse that the Spanish brought back.

"ICE AGE horse bones were found in 1938 in SANDIA MAN CAVE. These were carbon dated in the 1950's and they are 25,000 years old." - Ila Bromberg Archeologist, Monero Mustangs

Horses and the Range: Horses have two rows of teeth and trim grass rather than pulling it out with their tongue (by the roots), as other ungulates can/do.

Our Wild Horse Herd

The first horse re-introduced to the wild in the Americas may have been an escaped chestnut mare belonging to one of Cortez' Conquistadors, in 1519.

In 1540, Francisco Vasquez de Coronado and his Expedi-

tion rode their Spanish horses into the Rio Grande Valley near the current site of the Coronado State Park, across the river.

In 1598, Juan de Onate lost approximately 900 horses in what would become New Mexico, which is the first recorded band of horses to run

free in the present day United States.

Are the wild horses descendants of these Spanish horses, which are now extinct in Spain? Their conformation and DNA say yes. When the DNA from the wild horse herd in Placitas were tested, the results con-

firmed the Spanish heritage of many of the horses.

"Five of the horses were tested by the University of Kentucky and deemed 50 to 60 percent Spanish"

-Sandoval Signpost, Oct 04

WHOA Completes Fencing of Open Space

The Placitas wild horses roamed unfettered throughout the La Mesa and Sundance Subdivisions for years. Though most residents love them, WHOA initiated a public safety project to keep the horses (and cattle) off the roads. This 2 mile fence, (the third fence completed by WHOA) spans the entire southern and eastern sides of the Albuquerque Open Space, at a low cost of \$13,000. This fence and more is
