Comment Submitted:

In looking at the map it appears that an energy corridor has been identified within the USFWS, Bear River Migratory Bird Refuge. The map shows this corridor running north and south along the east side of the refuge. This area is almost all classified as wetland and is an environmentally important area. There are existing, two overhead electrical lines and two liquid fuel pipelines through this area. These were existing when the refuge acquired the property. Any further energy infrastructure development will need careful review.
