Unless seen on the internet how would the average citizen be aware of the Energy Corridor Programmatic EIS Corridor? It appears the public is being duped by large corporations once more who are sliding this program through without legally and properly informing the public. Who was aware of the Public Meetings? There were no notices sent or publications outside the metropolitan areas where most of the citizens will be effected by this program. What's the rush- are you concerned that if the citizens became aware of the dangers of your plan they would revolt? There is NO GAIN to the citizens and a great deal of pollution of the environment at a gross cost to tax payers, just for the scoping (whatever that entails- no reasonable explanation given. The agencies involved have proven not to be good ethical, reliable, or honest stewards of the environment in the past. I see too many opportunity for the energy agencies to make land grabs under

the guise of necessity for the success of your program while stripping citizens of their property rights protected under the Constitution. I am presently without electrical service since October 2001 since Pacific Power is refusing electrical service unless I allow all of their main line installations within my deeded real property without an easement, permit or right. Pacific Power has an easement at the Bonnville line about 1000 feet North on Federal Land. Extortion has been protected by City, County and State agencies as acceptable in my case, I do not wish this on anyone but it will be inevitable with the your Energy Corridor. The citizen will be stripped of their rights or and without government protection !!! I see no built in federal government controls or standards of the involved agencies. Why would any of these large conglomerates believe that if the citizens were truly informed would elect to have such an environmental albatros and potential deadly Energy Corridor in KNOWN/PROVEN EARTHQUAKE TERRITORY as citizens are prepare for 'the big one', and prepare for the next Sunami funded by the Federal Government One sill from a moderate sized earthquake could destroy our environment for eternity. Global warming would take second place in destroying our environment. This could be a deadly plan. Please reconsider the irresponsibility of your actions.
Thank You.
Sincerely Dee Schaufert
