Subject: FAQ Question

I will try to keep this to a question and save comments for the official form, but I have to say thanks for all the hard work on this project.

I have been reviewing the "draft map" and find it hard to determine where the proposed corridors are. Do you may have some additional data, local area maps, on each section of proposed corridor which shows an existing utility or land feature which is being used for the proposed route?

Can you assign numbers or some form of identification to each route section would help us to be specific in the requested comments?

At the same time, in reviewing the corridor routes, it does not appear that all corridors are available for all uses. Were there specific design uses that were "key" in the draft route selections or like-wise uses that were excluded from any route selection?

Thanks again for all the hard work to,

- **"improve reliability,"**
- **"relieve congestion,"** and
- **"enhance the capability of the national grid to deliver electricity."**
