Subject: Preliminary Draft Corridor Map Question about Web Commenting

The proposed Vally Electric powerline would have a detrimental effect on Indian Springs property values, aesthetics, and arguably could have health effects on the near residences.

Valley Electric representatives have indicated they prefer NOT to build through Indian Springs and the alternative southern corridor is preferable. With the available public land it appears as if that would be the most reasonable route for a utilities corridor. If there is a bonafide GOOD justification for not having the power corridor along the southern alternative, please have someone from BLM or any other entity involved in the decision process inform the residents of Indian Springs.

Respectfully,
Phillip R Frank
28 year resident
