Comment Submitted:

We would like to recommend an additional north to south “Intertie” to the proposed Southern California energy corridors paralleling Interstate 10 and Interstate 40 now considered in the West-Wide Energy Corridor Programmatic EIS. This connecting link could be located 20 miles west of the California – Arizona border serving as a bridge between existing energy corridors. This new proposed route strengthens grid security in the event of natural disasters or future acts of terrorism aimed at our energy infrastructures. Private development of future Hydrogen production plants and other utility scale renewable energy projects located adjacent to public land in the eastern California desert could benefit through additional market access gained through the

pipelines installed and electrical transmission lines contained in this additional link.
